Product overview

The HPE FlexNetwork 10500 Switch Series sets a new benchmark for performance, reliability, and scalability with next-generation Clos architecture. Designed for enterprise campus core networks, the 10500 Switch Series enables a cloud-connected and rich-media-capable infrastructure. The switch series provides 1/10/40 GbE port density, 3-microsecond latency, and very low energy consumption.

With Hewlett Packard Enterprise Intelligent Resilient Fabric (IRF) technology, the scalability and resiliency of the 10500 switch series can be extended and virtualized across up to four chassis with a single management interface—enabling flatter, more agile networks. This switch series, along with the entire Hewlett Packard Enterprise FlexNetwork architecture, can be seamlessly managed through the HPE Intelligent Management Center (IMC), which provides a single-pane-of-glass management view of the infrastructure.
