HP School Pack 2.0 featuring Corinth Classroom

Bring science lessons to life with interactive 3D visuals

Immersive Content

Corinth Classroom's visually immersive content provides multiple creative solutions for envisioning complex objects that are otherwise difficult to imagine or describe. The chance to explore in-depth can help make connections in the classroom and produce more "a-ha" moments for students.[1]

Corinth Classroom

Stimulate students' curiosity
Corinth Classroom helps teachers challenge their students and identify topics that engage them. Lessons cover all the major sciences—from biology to chemistry to physics—and start off with visual content designed to encourage students' natural curiosity. Lessons then transition into deeper learning with the help of quizzes, activities, and peer collaboration.

Reinforce 21st century skills
Corinth Classroom helps equip students to excel in STEM-based learning by incorporating skills such as creativity, critical thinking, collaboration, problem solving, and tech literacy. It also offers interactive lessons to challenge students to move beyond initial scientific concepts.
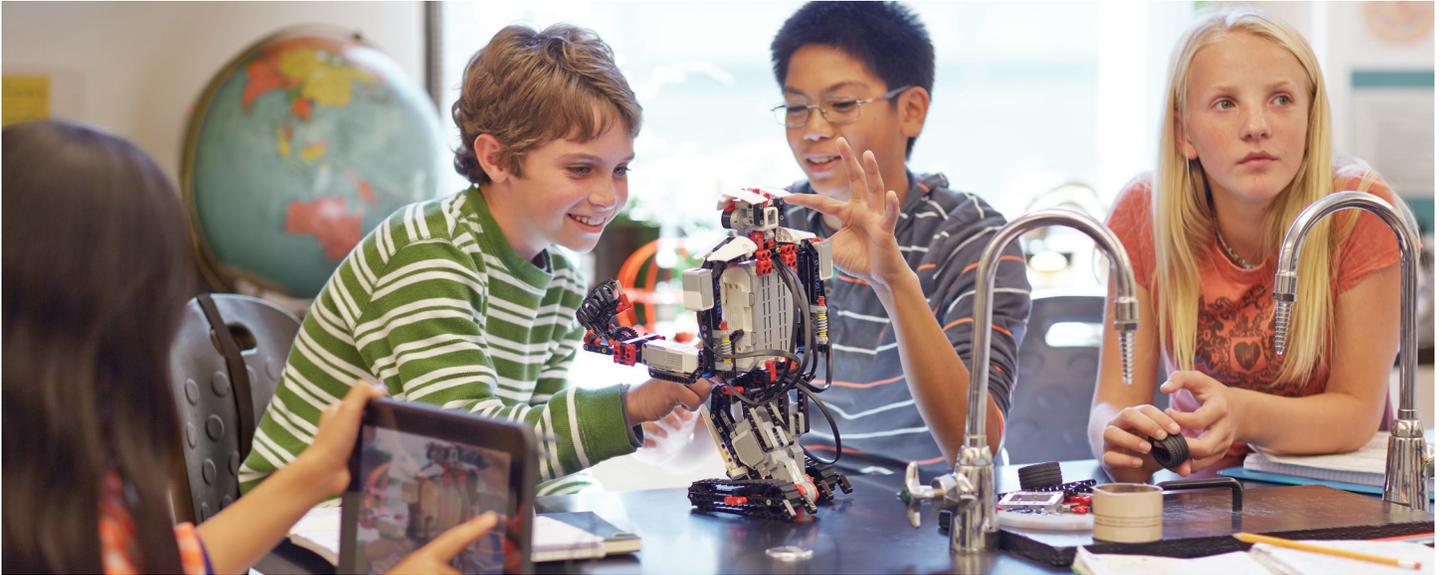

Bring textbooks to life and illustrate complicated topics with **interactive 3D visual content.**

User-friendly technology

To make sure that Corinth Classroom works seamlessly on any device, teachers and students from 90 countries participated in an in-depth testing regime. The resulting intuitive design ensures that even first timers will easily navigate their way through this cutting-edge technology.

Encourage students' love for science

Corinth Classroom fascinates students, catches their attention, and motivates them to learn more. The online app is filled with interactive objects[2] that put an exciting twist on STEM learning—while within the tool itself students can take notes, test their memory, and share their discoveries with peers.

System requirements

Corinth Classroom's mobile capabilities allow it to work with nearly every portable device.
