HPE FlexNetwork HSR6600 Router Series

Overview

HPE FlexNetwork HSR6600 Router Series

Models

HPE FlexNetwork HSR6602 G Router JG353A
HPE FlexNetwork HSR6602 XG Router JG354A

Key features

- High-performance WAN routing up to 15 Mpps
- Compact, multi-core centralized processing architecture
- Comprehensive routing, VPN and security
- Modular WAN and LAN connectivity options
- Robust high availability and resiliency

Product overview

The HPE FlexNetwork HSR6600 Router Series is made up of high-performance services WAN routers that are ideal for small- to medium-sized campus WAN edge and aggregation, as well as high-end branch deployments.

These routers are built with a high performance multi-core networking processor that delivers, in a 2 RU form factor, robust routing, security, and modular WAN and LAN interface options, all integrated in a single compact and powerful routing platform.

In addition, these routers feature robust carrier-class reliability capabilities to reduce disruption from network or system failures.

Features and benefits

Connectivity

- **Multiple WAN interfaces**
  support Fast Ethernet/Gigabit Ethernet/10GbE ports, OC3-OC48 POS/CPOS, and ATM ports
- **Flexible port selection**
  provides a combination of fiber/copper interface modules, 100/1000BASE-X auto-speed selection, and 10/100/1000BASE-T auto-speed detection plus auto duplex and MDI/MDI-X; is speed adaptable between 155 M POS/622 M POS/Gigabit Eth
- **Loopback**
Overview

supports internal loopback testing for maintenance purposes and an increase in availability; loopback detection protects against incorrect cabling or network configurations and can be enabled on a per-port or per-VLAN basis for added flexibility

Performance

- **High-performance platform**
  provides up to 15 Mpps forwarding performance

Resiliency and high availability

- **Separate data and control planes**
  provide greater flexibility and enable continual services
- **Hot-swappable modules**
  facilitates the replacement of hardware interface modules without impacting the traffic flow through the system
- **Optional redundant power supply**
  provides uninterrupted power; allows hot-swapping of one of the two supplies when installed
- **Virtual Router Redundancy Protocol (VRRP)**
  allows groups of two routers to dynamically back each other up to create highly available routed environments
- **Graceful restart**
  supports graceful restart for OSPF, IS-IS, BGP, LDP, and RSVP; the network remains stable during the active-standby switchover; after the switchover, the device quickly learns the network routes by communicating with adjacent routers; forwarding remains uninterrupted during the switchover to achieve nonstop forwarding (NSF)
- **Hitless software upgrades**
  allow patches to be installed without restarting the device, increasing network uptime and simplifying maintenance
- **IP Fast Reroute Framework (FRR)**
  nodes are configured with backup ports and routes; local implementation requires no cooperation of adjacent devices, simplifying the deployment; solves the traditional convergence faults in IP forwarding; achieves restoration within 50 ms, with the restoration time independent of the number of routes and fast link switchovers without route convergence

Product architecture

- **Multi-core CPU**
  delivers multi-threaded processing, with eight cores and 32 hardware threads
- **Distributed processing**
  two kinds of engines are hardware separated: main controller engine (routing engine) and service engines (Flexible Interface Platform [FIP]); the main controller engine is used for route computing and system management, and service engines are used for processing services

Layer 3 routing

- **Static IPv4 routing**
  provides simple manually configured IPv4 routing
- **Routing Information Protocol (RIP)**
  uses a distance vector algorithm with UDP packets for route determination; supports RIPv1 and RIPv2 routing; includes loop protection
- **Open shortest path first (OSPF)**
  delivers faster convergence; uses this link-state routing Interior Gateway Protocol (IGP), which supports ECMP, NSSA, and MD5 authentication for increased security and graceful restart for faster failure recovery
- **Border Gateway Protocol 4 (BGP-4)**
  delivers an implementation of the Exterior Gateway Protocol (EGP) utilizing path vectors; uses TCP for enhanced reliability for the route discovery process; reduces bandwidth consumption by advertising only incremental updates; supports extensive policies for increased flexibility; scales to very large networks
- **Intermediate system to intermediate system (IS-IS)**

Page 2
Overview

uses a path vector Interior Gateway Protocol (IGP), which is defined by the ISO organization for IS-IS routing and extended by IETF RFC 1195 to operate in both TCP/IP and the OSI reference model (Integrated IS-IS)

- **Static IPv6 routing** provides simple manually configured IPv6 routing

- **Dual IP stack** maintains separate stacks for IPv4 and IPv6 to ease the transition from an IPv4-only network to an IPv6-only network design

- **Routing Information Protocol next generation (RIPng)** extends RIPv2 to support IPv6 addressing

- **OSPFv3** provides OSPF support for IPv6

- **BGP+** extends BGP-4 to support Multiprotocol BGP (MBGP), including support for IPv6 addressing

- **IS-IS for IPv6** extends IS-IS to support IPv6 addressing

- **IPv6 tunneling** allows IPv6 packets to traverse IPv4-only networks by encapsulating the IPv6 packet into a standard IPv4 packet; supports manually configured, 6to4, and Intra-Site Automatic Tunnel Addressing Protocol (ISATAP) tunnels; is an important element for the transition from IPv4 to IPv6

- **Multiprotocol Label Switching (MPLS)** uses BGP to advertise routes across Label Switched Paths (LSPs), but uses simple labels to forward packets from any Layer 2 or Layer 3 protocol, which reduces complexity and increases performance; supports graceful restart for reduced failure impact; supports LSP tunneling and multilevel stacks

- **Multiprotocol Label Switching (MPLS) Layer 3 VPN** allows Layer 3 VPNs across a provider network; uses MP-BGP to establish private routes for increased security; supports RFC 2547bis multiple autonomous system VPNs for added flexibility

- **Multiprotocol Label Switching (MPLS) Layer 2 VPN** establishes simple Layer 2 point-to-point VPNs across a provider network using only MPLS Label Distribution Protocol (LDP); requires no routing and therefore decreases complexity, increases performance, and allows VPNs of non-routable protocols; uses no routing information for increased security; supports Circuit Cross Connect (CCC), Static Virtual Circuits (SVCs), Martini draft, and Kompella-draft technologies

- **Policy routing** allows custom filters for increased performance and security; supports ACLs, IP prefix, AS paths, community lists, and aggregate policies

- **Multicast VPN** supports Multicast Domain (MD) multicast VPN, which can be distributed on separate service cards, providing high performance and flexible configuration

- **Virtual Private LAN Service (VPLS)** establishes point-to-multipoint Layer 2 VPNs across a provider network

- **Bidirectional Forwarding Detection (BFD)** enables link connectivity monitoring and reduces network convergence time for RIP, OSPF, BGP, IS-IS, VRRP, MPLS, and IRF

- **IGMPv1, v2, and v3** allow individual hosts to be registered on a particular VLAN

- **PIM-SSM, PIM-DM, and PIM-SM (for IPv4 and IPv6)** support IP Multicast address management and inhibition of DoS attacks

- **Equal-Cost Multipath (ECMP)** enables multiple equal-cost links in a routing environment to increase link redundancy and scale bandwidth

- **OSPFv3 MCE** Multi-VPN-Instance CE (MCE) binds different VPNs to different interfaces on one single CE; the OSPFv3 MCE feature creates and maintains separate OSPFv3 routing tables for each IPv6 VPN to isolate VPN services in the device

Layer 3 services

- **Address Resolution Protocol (ARP)**
Overview

determines the MAC address of another IP host in the same subnet; supports static ARPs; gratuitous ARP allows detection of duplicate IP addresses; proxy ARP allows normal ARP operation between subnets or when subnets are separated by a Layer 2 network

- **User Datagram Protocol (UDP) helper**
  redirects UDP broadcasts to specific IP subnets to prevent server spoofing

- **Domain Name System (DNS)**
  provides a distributed database that translates domain names and IP addresses, which simplifies network design; supports client and server

- **Dynamic Host Configuration Protocol (DHCP)**
  simplifies the management of large IP networks

Security

- **Dynamic Virtual Private Network (DVPN)**
  collects, maintains, and distributes dynamic public addresses through the VPN Address Management (VAM) protocol, making VPN establishment available between enterprise branches that use dynamic addresses to access the public network; compared to traditional VPN technologies, DVPN technology is more flexible and has richer features, such as NAT traversal of DVPN packets, AAA identity authentication, IPSec protection of data packets, and multiple VPN domains

- **Group Domain Virtual Private Network (GDVPN)**
  a tunnel-less VPN technology that allows for native end-to-end security for a full meshed network; suitable for an enterprise running encryption over a private Multiprotocol Label Switching (MPLS)/IP-based core network, as well as to encrypt multicast traffic

- **Stateful VPN Firewall**
  provides enhanced stateful packet inspection and filtering; supports flexible security zones and virtual firewall containment; provides advanced VPN services with Triple DES (3DES) and Advanced Encryption Standard (AES) encryption at high performance and low latency, Web content filtering, and application prioritization and enhancement

- **Access control list (ACL)**
  supports powerful ACLs for both IPv4 and IPv6; ACLs are used for filtering traffic to prevent unauthorized users from accessing the network, or for controlling network traffic to save resources; rules can either deny or permit traffic to be forwarded; rules can be based on a Layer 2 header or a Layer 3 protocol header; rules can be set to operate on specific dates or times

- **Unicast Reverse Path Forwarding (URPF)**
  allows normal packets to be forwarded correctly, but discards the attaching packet due to lack of reverse path route or incorrect inbound interface; prevents source spoofing and distributed attacks; supports distributed UFPF

- **Secure shell (SSHv2)**
  uses external servers to securely log in to a remote device; with authentication and encryption, it protects against IP spoofing and plain-text password interception; increases the security of Secure FTP (SFTP) transfers

- **Remote Authentication Dial-In User Service (RADIUS)**
  eases switch security access administration by using a password authentication server

- **Terminal Access Controller Access-Control System (TACACS+)**
  delivers an authentication tool using TCP with encryption of the full authentication request, providing additional security

- **Network address translation (NAT)**
  supports repeated multiplexing of a port and automatic 5-tuple collision detection, enabling NAPT to support unlimited connections; supports blacklist in NAT/NAPT/internal server, a limit on the number of connections, session log, and multi-instance

Quality of Service (QoS)

- **HQoS / Nested QoS**
  allows for precise and flexible traffic classification and scheduling

- **Traffic policing**
  supports Committed Access Rate (CAR) and line rate

- **Congestion management**
  supports FIFO, PQ, CQ, WFQ, CBQ, and RTPQ
QuickSpecs

HPE FlexNetwork HSR6600 Router Series

Overview

- **Weighted random early detection (WRED)/random early detection (RED)**
  delivers congestion avoidance capabilities through the use of queue management algorithms
- **Other QoS technologies**
  support traffic shaping, FR QoS, MPLS QoS, and MP QoS/LFI

Management

- **Industry-standard CLI with a hierarchical structure**
  reduces training time and expenses, and increases productivity in multivendor installations
- **SNMPv1, v2, and v3**
  provide complete support of SNMP; provide full support of industry-standard Management Information Base (MIB) plus private extensions; SNMPv3 supports increased security using encryption
- **Management interface control**
  enables or disables each of the following interfaces depending on security preferences: console port, Telnet port, or reset button
- **Remote monitoring (RMON)**
  uses standard SNMP to monitor essential network functions; supports events, alarm, history, and statistics group plus a private alarm extension group
- **Management security**
  restricts access to critical configuration commands; offers multiple privilege levels with password protection; ACLs provide Telnet and SNMP access; local and remote syslog capabilities allow logging of all access
- **FTP, TFTP, and SFTP support**
  offers different mechanisms for configuration updates; FTP allows bidirectional transfers over a TCP/IP network; trivial FTP (TFTP) is a simpler method using User Datagram Protocol (UDP); Secure File Transfer Protocol (SFTP) runs over an SSH tunnel to provide additional security
- **Debug and sampler utility**
  supports ping and traceroute for both IPv4 and IPv6
- **Network Quality Analyzer (NQA)**
  analyzes network performance and service quality by sending test packets, and provides network performance and service quality parameters such as jitter, TCP, or FTP connection delays and file transfer rates; allows a network manager to determine overall network performance and to diagnose and locate network congestion points or failures
- **Network Time Protocol (NTP)**
  synchronizes timekeeping among distributed time servers and clients; keeps timekeeping consistent among all clock-dependent devices within the network so that the devices can provide diverse applications based on the consistent time
- **Information center**
  provides a central repository for system and network information; aggregates all logs, traps, and debugging information generated by the system and maintains them in order of severity; outputs the network information to multiple channels based on user-defined rules

Multicast support

- **Internet Group Management Protocol (IGMP)**
  utilizes Any-Source Multicast (ASM) or Source-Specific Multicast (SSM) to manage IPv4 multicast networks; supports IGMPv1, v2, and v3
- **Protocol Independent Multicast (PIM)**
  defines modes of Internet IPv4 and IPv6 multicasting to allow one-to-many and many-to-many transmission of information; PIM Dense Mode (DM), Sparse Mode (SM), and Source-Specific Mode (SSM) are supported
- **Multicast Source Discovery Protocol (MSDP)**
  allows multiple PIM-SM domains to interoperate; is used for inter-domain multicast applications
- **Multicast Border Gateway Protocol (MBGP)**
  allows multicast traffic to be forwarded across BGP networks separately from unicast traffic

Additional information
Overview

- **Green initiative support**
  provides support for RoHS and WEEE regulations

Warranty and support

- **1-year warranty**

HPE FlexNetwork 6600 8-port OC-3c/OC-12c POS/GbE SFP HIM Module JG673A

Note 6  If this Module is selected, Then the JC566A - HPE A6600 RSE-X1 Main Processing Unit or JG780A - HPE 6600 RSE-X1 Router TAA MPU is required.

Note 7  This module is only supported in the following routers:
HPE FlexNetwork 6616 Router Chassis JC496A
HPE FlexNetwork 6608 Router Chassis JC177B
HPE FlexNetwork 6604 Router Chassis JC178B

Note 8  If this Module is selected with a legacy router (JC178B, JC177B, and JC496A), then one of the following Management Module is required:
HPE FlexNetwork 6600 MCP-X1 Router Main Processing Unit JG355A
HPE FlexNetwork 6600 MCP X2 Router TAA-compliant Main Processing Unit JG778A
HPE FlexNetwork 6600 MCP-X2 Router Main Processing Unit JG356A

Note 9  The following Modules installs into this Service Module: Max = 2 (Use #0D1 if router is CTO) - if applicable
HPE FlexNetwork MSR 2-port Enhanced Serial MIM Module JD540A

HPE FlexNetwork HSR6800 16-port GbE SFP HIM Module JH142A
HPE FlexNetwork HSR6800 2-port 10GbE SFP+ HIM Module JH143A
## Remarks:

- **CONFIGURATOR BLUE TEXT:**
  JG357A - HPE 6600 FIP-10 Flex Intf Pltfrm Rtr Mod is only supported on Comware V5. It is not supported when using Comware V7.

- **CONFIGURATOR BLUE TEXT:**
  Him Modules JH142A - HPE HSR6800 16-p GbE SFP HIM Mod and JH143A - HP HSR6800 2-p 10GbE SFP+ HIM Mod are only supported in JG358A - HPE 6600 FIP-20 Flex Intf Pltfrm Rtr Mod when using Comware V7.

**Configuration Rules:**

**Note 1**  
If 2 power supplies are selected they must be the same SKU number.

**Note 2**  
Only supported on the 6604 (JC178B) and (JC177B) 6608 routers. (Watson Default JD217A)
Configuration

Note 3  Only supported on the 6616 (JC496A) routers. (Watson Default JC492A)

Note 4  Only supported on the new JG353A, JG776A, JG354A, JG777A routers. (Watson Default JC087A)

Note 5  Localization (Wall Power Cord) required on orders without #B2B, #B2C (PDU Power Cord) or #B2E. (See Localization Menu)

Note 6  When Switches/Routers are Factory Racked, Then #B2B, or #B2C should be the Defaulted Power Cable option on the Switches/Routers.

Remarks:  Drop down under power supply should offer the following options and results:
Switch/Router/Power Supply to PDU Power Cord - #B2B in North America, Mexico, Taiwan, and Japan or #B2C ROW. (Watson Default B2B or B2C for Rack Level CTO)
Switch/Router/Power Supply to Wall Power Cord - Localized Option (Watson Default for BTO and Box Level CTO)
High Volt Switch/Router/Power Supply to Wall Power Cord - #B2E Option. (Offered only in North America, Mexico, Taiwan, and Japan)

**Compact Flash**

JG353A, JG776A, JG354A, JG777A only - System (std 1 // max 2) User Selection (min 0 // max 1) per router

- HPE X600 512M Compact Flash Card
  - JC685A
  - See Configuration
  - NOTE:1
- HPE X600 1G Compact Flash Card
  - JC684A
  - See Configuration
  - NOTE:1

**Configuration Rules:**

**Note 1**

This Compact Flash installs to the following routers only:

- HPE FlexNetwork HSR6602 G Router
  - JG353A
- HPE FlexNetwork HSR6602 G TAA-compliant Router
  - JG776A
- HPE FlexNetwork HSR6602 XG Router
  - JG354A
- HPE FlexNetwork HSR6602 XG TAA-compliant Router
  - JG777A

**Opacity Shield Kit**

System (std 0 // max 1) User Selection (min 0 // max 1)

- HPE FlexNetwork HSR6602 Router Opacity Shield Kit
  - JG674A
  - See Configuration
  - NOTE:1
  - Supported on JG776A, JG777A
- HPE 6616 Router Opacity Shield Kit
  - JG576A
  - See Configuration
  - NOTE:2
  - Supported on JC496A
- HPE 6608 Router Opacity Shield Kit
  - JG577A
  - See Configuration
  - NOTE:1
  - Supported on JC177B
- HPE 6604 Router Opacity Shield Kit
  - JG578A
  - See Configuration
  - NOTE:1
  - Supported on JC178B

**Configuration Rules:**
Configuration

Note 1  If selected with a CTO Router Solution, Quantity 1 of JG585A#B01 must also be ordered.

Note 2  If selected with a CTO Router Solution, Quantity 1 of JG586A#B01 must also be ordered.

Tamper Evidence Labels

System (std 0 // max 1) User Selection (min 0 // max 1)

HPE 12mm x 60mm Tamper Evidence (30) Labels
   - Supported on JG776A, JG777A, JC496A, JC177B, JC178B

   JG585A
See Configuration

   NOTE:1

HPE 12mm x 60mm Tamper Evidence (100) Labels
   - Supported on JC496A

   JG586A
See Configuration

   NOTE:2

Configuration Rules:

Note 1  If selected with a CTO Router Solution, Quantity 1 of JG674#B01, JG577A#B01 or JG578A#B01 must also be ordered.

Note 2  If selected with a CTO Router Solution, Quantity 1 of JG576A#B01 must also be ordered.

Remarks:  Each JG674A, JG575A, JG577A or JG578A would use 1 of JG585A.
Each JG576A would use 1 of JG586A.
HPE FlexNetwork HSR6602 G Router (JG353A)

I/O ports and slots
- 4 Combo GbE (SFP and RJ45)
- 1 port expansion module slot

Additional ports and slots
- 2 RJ-45 serial console ports
- 1 USB 2.0
- 1 RJ-45 out-of-band management port
- 1 Compact Flash port

Physical characteristics
- Dimensions: 17.32(w) x 18.9(d) x 3.46(h) in (44 x 48 x 8.8 cm) (2U height)
- Weight: 26.68 lb (12.1 kg) shipping weight

Memory and processor
- Processor: Multi-core PowerPC @ 1500 MHz, 8 MB flash, 2 GB SDRAM, 512 MB compact flash

Mounting and enclosure
- EIA standard 19 in. rack

Performance
- IPv6 Ready Certified
- Latency: 13.5 µs (FIFO 64-byte packets)
- Throughput: up to 9 Mpps (64-byte packets)
- Switch fabric speed: 80 Gbps
- Routing table size: 1000000 entries (IPv4), 1000000 entries (IPv6)
- Forwarding table size: 1000000 entries (IPv4), 1000000 entries (IPv6)
- Backplane bandwidth: 80 Gbps

Environment
- Operating temperature: 32ºF to 113ºF (0ºC to 45ºC)
- Operating relative humidity: 5% to 95%, noncondensing
- Altitude: up to 13,123 ft (4 km)

Electrical characteristics
- Frequency: 50/60 Hz
- Maximum heat dissipation: 505 BTU/hr (532.78 kJ/hr)
- Voltage: 100 - 240 VAC, rated
- Maximum power rating: 300 W
- (depending on power supply chosen)

Notes
- Maximum power rating and maximum heat dissipation are the worst-case theoretical maximum numbers provided for planning the infrastructure with fully loaded PoE (if equipped), 100% traffic, all ports plugged in, and all modules populated.

## 10-U Transceiver (JD098B)

A small form-factor pluggable (SFP) Gigabit LX-BX10-U transceiver that provides a full duplex Gigabit solution up to 10km on a single mode cable.

### Connectivity
- Connector type: LC

### Physical characteristics
- Dimensions: 2.17(d) x 0.6(w) x 0.46(h) in. (5.51 x 1.52 x 1.17 cm)

### Electrical characteristics
- Power consumption typical: 0.8 W
- Power consumption maximum: 1.0 W

### Cabling
- Maximum distance:
  - 10km
- Fiber type: Single Mode

### Notes
- TX 1310nm RX 1490nm

### Electrical characteristics
- Wavelength: 1550 nm
- Power consumption typical: 0.8 W
- Power consumption maximum: 1.0 W

### Cabling
- Cable type: Single-mode fiber optic, complying with ITU-T G.652;

### Notes
- TX 1490nm RX 1310nm

### Services
- Refer to the Hewlett Packard Enterprise website at [http://www.hpe.com/networking/services](http://www.hpe.com/networking/services) for details on the service-level descriptions and product numbers. For details about services and response times in your area, please contact your local Hewlett Packard Enterprise sales office.
## Accessory Product Details

### HPE X120 1G SFP LC SX Transceiver (JD118B)

**Ports**
- 1 LC 1000BASE-SX port

**Connectivity**
- **Connector type**: LC
- **Wavelength**: 850 nm

**Physical characteristics**
- **Dimensions**: 2.17(d) x 0.6(w) x 0.46(h) in. (5.51 x 1.52 x 1.17 cm)
- **Full configuration weight**: 0.04 lb. (0.02 kg)

**Electrical characteristics**
- **Power consumption typical**: 0.8 W
- **Power consumption maximum**: 1.0 W

**Cabling**
- **Maximum distance**:
  - FDDI Grade distance = 220m
  - OM1 = 275m
  - OM2 = 500m
  - OM3 = Not Specified by standard
- **Cable length**: up to 550m

**Fiber type**: Multi Mode

### HPE X120 1G SFP LC LX Transceiver (JD119B)

**Ports**
- 1 SFP 1000BASE-LX port (IEEE 802.3z Type 1000BASE-LX)

**Connectivity**
- **Connector type**: LC
- **Wavelength**: 1300 nm

**Physical characteristics**
- **Dimensions**: 2.17(d) x 0.6(w) x 0.46(h) in. (5.51 x 1.52 x 1.17 cm)
- **Full configuration weight**: 0.04 lb. (0.02 kg)

**Electrical characteristics**
- **Power consumption typical**: 0.8 W
- **Power consumption maximum**: 1.0 W

**Cabling**
- **Maximum distance**:
  - 550m for Multimode
  - 10km for Singlemode
- **Fiber type**: Both

**Services**
